Inspection shall be carried out per each delivery lot.
- 2) Inspection method
A single sampling plan, normal inspection level II based on ISO2859 shall be adopted.

Parameter		Inspection Item	AQL(%)
Major Defect	1	Satisfies electro-optical characteristics in parameter	0.4
	2	It should have no disconnection of lead terminal It should have no dust and solder that would hinder PCB insertion	
	3	Free from foreign on the connector coupling portion that would hinder plug insertion	
Minor defect	1	Deformation of case and lead terminal	1.5
	2	Stamp should be indicated at fixed position	

8. Soldering Condition

- 1) The distance between holes should be the same as that of between terminal leads of the component to avoid any stress during the soldering process. This may lead to the open circuit. Also, lead forming should be done before soldering process not to apply any stress to the inside of the epoxy resin.
- 2) Not to apply any stress to the component during the soldering process.
- 3) Recommended soldering condition.

Item	Condition
Pre-heating & Solder Bath	- Pre-heating : Less than 90°C - Solder Bath : 260°C - Soldering Area : 3mm away from the bottom the epoxy resin - Dipping time : Less than 5seconds. Less than twice.
Soldering – Iron	- Temperature : Less than 350°C, within 3 seconds.

※ Note

- Not to apply high temperature exceeding the maximum storage temperature to the epoxy resin.
- Not to apply any force to the epoxy resin at high temperature.

- 4) Washing Some chemicals may damage the epoxy resin. Ethyl-alcohol is recommended under the following condition.

Chemical washing	- Temperature : Less than 45°C - Wash time : Less than 3 minutes
Ultrasound washing	- Power : Less than 15W - Wash time : Less than 3 minutes
